

A picture is worth a thousand words. In today's modern world, the availability of digital imagery is a very efficient and useful tool to record clinical information whether health or disease. Images are useful before, during and after treatment. It is a wonderful communication tool to convey information to fellow specialists who may share in your care or your child's care. It is invaluable to allow our lab technicians to visually see the human being we are treating together. Clinical images often provide supplemental information that can be used to support your claim for dental benefits. Should you agree to further allow us to share your images with others beyond their private clinical use, the images become a teaching tool to demonstrate before and after results of treatment that are difficult for most lay-people to visualize. We respect your privacy and ask that you state your preferences on how these images can be used.

Photographic and Video Image Consent Form

I grant Dr. Afshin Vahadi/ Dr. Vafa Mirshams the right to use my images for clinical review, educational and/or publicity purposes.

Primary categorical use of recorded images:
